

Environmental Statement

At Ballyhoo Ltd, we are committed to reducing the negative effects of our every day activities on the environment. We encourage all employees and clients to have an environmental conscience and make our practices their habit at work and at home.

Reduce

We aim to reduce the amount of resources and energy we use as much as possible. We will use alternatives to using paper, such as communicating by email, and never leave electrical appliances and lights on when not being used. We also use public transport when possible.

Re-use

We will re-use any items that we can in a bid to cut down our use of resources. For example, surplus letters and envelopes will be used as scrap notepaper and where possible we will re-use paper for printing.

Recycle

Anything that can be recycled, will be. We operate a recycling scheme in the office whereby paper that has no further use, plastic bottles and tins are separated and recycled. We also use only FSC sourced paper and card for our business stationery and printing needs.

Renew

We are also proud to say that our hosting provider relies solely on renewable energy to power our servers.

These steps ensure we are doing all that is conceivably possible to preserve natural resources.
